

REZWAN ISLAM NAHID

Senior Web Designer | Figma & UX | Conversion-Focused Agency Work

Sylhet, Bangladesh • +880 1775-201332 • rezwannahid1996@gmail.com • dribbble.com/rezwan_uiux

PROFESSIONAL SUMMARY

Senior web designer with 6+ years of agency and client-facing experience designing high-converting websites in Figma for e-commerce, SaaS, finance, and hospitality brands. Owns the full design loop — UX research, visual aesthetic, design systems, and QA across Webflow and WordPress — with a track record of shipping polished, on-brand sites under tight one-month turnarounds. AI-fluent, conversion-led, and a calm collaborator with developers, copywriters, and direct clients.

WORK EXPERIENCE

Senior Web Designer (UI/UX) — Loudface2024 – Present

- Lead end-to-end web design for client projects in Figma — owning visual aesthetic, UX, and pre-launch QA of development and copy — with most projects shipped inside a one-month timeline.
- Redesigned landing pages and core funnels with conversion-rate best practices (clearer hierarchy, sharper CTAs, A/B-tested heroes), contributing to measurable lifts in client lead and signup volumes.
- Built and maintained a reusable Figma design system (auto-layout components, variables, shared styles) that cut design production time on new client websites by roughly 40%.
- Collaborated daily with developers and copywriters on Webflow and WordPress builds, running pixel and content QA to keep launched sites bug-free and on-brand.
- Applied user-behaviour analysis and heuristic reviews to underperforming client sites, identifying friction points that informed redesign scope and post-launch iteration.
- Used AI tooling (Claude, v0, Cursor, Midjourney, Figma AI) to accelerate research synthesis, prototype generation, asset creation, and developer handoff — shortening early-stage design cycles by an estimated 30%.

UI/UX Designer — Creative AliensMar 2022 – 2024

- Designed digital products end-to-end for agency websites, booking platforms, NFT marketplaces, finance apps, and e-commerce stores — from sitemap and moodboard through wireframes to high-fidelity Figma UI.
- Established and maintained the design system across multiple live products, standardising components and auto-layout to speed up developer handoff and visual consistency.
- Improved checkout and onboarding flows for e-commerce and finance clients, contributing to measurably higher task completion in client analytics post-launch.
- Worked directly with international clients in English to translate business goals into UX decisions and rationale-backed UI.

Front-End Developer & UI/UX Designer — AppifyLabNov 2021 – Feb 2022

- Converted Figma designs into fully responsive, W3C-validated, cross-browser-tested HTML/CSS/JS builds for client websites and dashboards.
- Designed landing pages in Figma and shipped them to production in Webflow, tightening the loop between design and live page.
- Built admin dashboards in Bootstrap and jQuery with structured QA before backend handoff, reducing post-implementation bug reports.

UI Developer & Designer — SolutionFlowsMar 2020 – Oct 2021

- Converted Figma, PSD, and AI files into responsive Bootstrap and TailwindCSS templates using Flexbox and Grid for full mobile coverage.
- Designed and shipped UI for investment, food-delivery, banking, and e-commerce products, applying UX best practices to client-tested flows.

- Delivered WordPress and custom-coded client projects (agency sites, school management, live streaming, e-commerce) with a strong on-time delivery record.
- Consulted directly with international clients in English to gather requirements, present design options, and maintain repeat engagements.

AI TOOLS IN DAILY WORKFLOW

Claude / ChatGPT — UX copy drafting, research synthesis, user-flow brainstorming, client brief breakdown.

v0 (Vercel) — Rapid prototyping from Figma to working code for quick stakeholder reviews and dev handoff.

Cursor / Claude Code — Pairing with developers, shipping small front-end fixes, and tightening design-to-dev feedback loops.

Midjourney / Sora — Moodboards, hero imagery, and on-brand concept visuals during early design phases.

Figma AI / Make — In-tool generation, variant exploration, and auto-layout assistance to accelerate Figma production.

CORE SKILLS

Design & UX: Figma (advanced), UI/UX design, design systems, auto-layout, components & variables, wireframing, prototyping, moodboards, sitemaps, user-behaviour analysis, conversion rate optimisation, A/B testing.

Front-End: HTML5, CSS3, Bootstrap, TailwindCSS, JavaScript, jQuery, responsive Flexbox/Grid, W3C-validated builds, cross-browser QA.

CMS & Tools: Webflow, WordPress (Elementor, WPBakery), Shopify basics, Photoshop, Illustrator.

Collaboration: Client-facing communication, developer & copywriter handoff, project timeline management, async agency workflows.

EDUCATION

B.Sc. in Computer Science & Engineering — Leading University, Sylhet *Graduated Feb 2020*

CGPA: 3.58 / 4.00
